

ORAC (Oxygen Radical Absorbance Capacity)

ORAC Measures the degree to which a sample inhibits the action of an oxidizing agent and how long it takes to do so. Then it integrates the two measurements into a single one. This having different strengths. “Whole fruits and vegetables contain a mixture of natural antioxidants that can protect the vulnerable compounds.”

And The Newly Developed (Tufts University)

SOD (Super Oxide Dismutase) Activity or S-ORAC score is even more important than the ORAC score for a food.

It is the measurement of our body’s ability to neutralize oxidation caused by our environment.

The Newly Re-Formulated Berry Young Juice (now containing whole Ningxia Wolfberries from the Ningxia Province in China, and a puree of the whole fruit mixed in with it’s juice is what gives the New Berry Young Juice and the Newly Packaged (Also June 1, 2005) Juice called “Ningxia Red**” Their Super High ORAC and S-ORAC Ratings.**

This is the Same Juice (BYJ & Ningxia Red) only packaged differently for marketing purposes around the world!

These Juices Are Tested continually for purity and ingredient integrity and for nutritional value using both the ORAC and the S-ORAC testing method among other available testing methods.
